

Factory-direct pipe protection

Pipeline Anti-Corrosion Tape Product and RFQ Guide

Prepared for buyers comparing PP mesh reinforced tape, PE double-sided anti-corrosion tape, and project-specified PVC pipe wrap routes before samples, quotation, or PI follow-up.

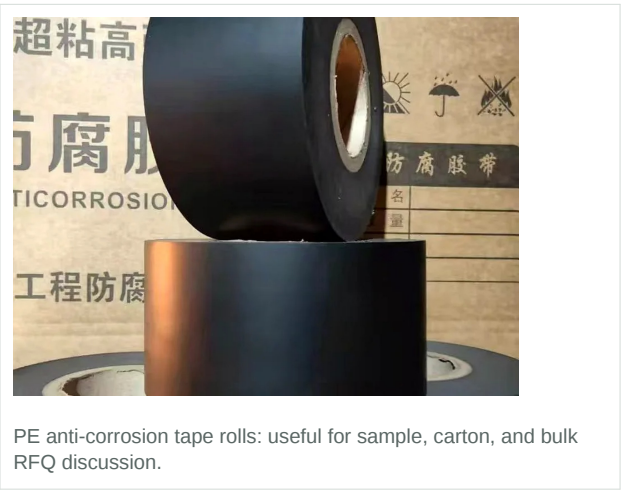

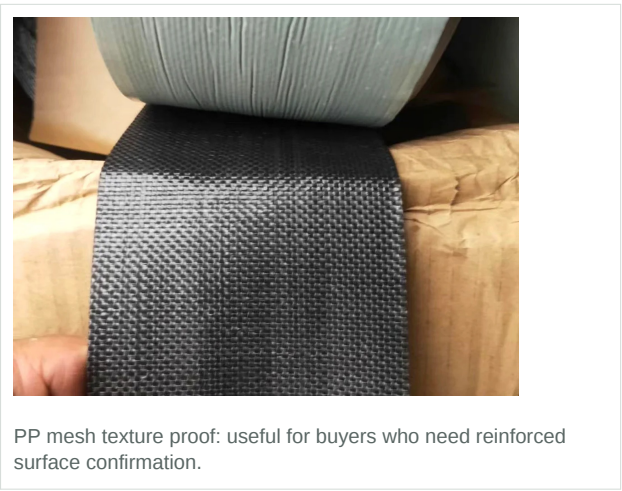

Company	Tianjin Snowball Trading Co., Ltd. / Pipeline Wrap Pro
Factory context	Small anti-corrosion tape factory team of about 20 people in Cangzhou, Hebei, China
Core products	PP mesh reinforced anti-corrosion tape and PE double-sided anti-corrosion tape
Optional route	PVC pipe wrap / anti-corrosion tape only when the project specifically asks for PVC
Contact	Email: khJeanking@outlook.com WhatsApp search name: KingPipelineWrapPro

No public fixed price is listed. Final quotation depends on product family, width, thickness, roll length, quantity, packing, destination, trade term, and document requirements.

Product Lines

Product	Best used when buyer says	RFQ details to confirm
PP Mesh Reinforced Anti-Corrosion Tape	Reinforced texture, stronger wrap handling, field joints, elbows, repair sections, or project-defined wrapping.	Width, thickness, roll length, pipe diameter, quantity, packing, destination, and next step.
PE Double-Sided Anti-Corrosion Tape	Polyethylene adhesive tape structure, buried pipeline wrapping, repair wrapping, distributor samples, or custom roll-size matching.	Backing/adhesive structure, width, thickness, roll length, quantity, carton packing, and shipment route.
PVC Pipe Wrap / Anti-Corrosion Tape	Only when the buyer's project specifically requests PVC. Keep it separate from PE and PP engineering tape routes.	PVC requirement, application context, roll dimensions, packing, quantity, destination, and reference sample if available.

RFQ Checklist

Send these details in one message so the factory team can reply with a practical sample route, shipping follow-up, quotation, or PI preparation path.

Field	Buyer should send	Why it matters
Product family	PP mesh reinforced, PE double-sided, PVC project-specified, or not sure.	Routes the inquiry to the right material and reply template.
Pipe size / tape width	Pipe diameter, target tape width, or current sample width.	Helps confirm width and wrapping plan.
Thickness / reference	Target thickness or photos of an existing roll/spec sheet.	Affects structure, packing, and price calculation.
Roll length	Preferred roll length or current supplier's length.	Needed for carton count and quantity conversion.
Quantity	Sample roll, trial carton, number of rolls, cartons, or project quantity.	Required before quotation or PI.
Packing and marks	Core, rolls per carton, label, carton marks, pallet request.	Prevents packing mismatch before shipment.
Destination	Country, city, postal code, port, or forwarder warehouse.	Needed for courier, carton, pallet, FOB, CIF, or DDP discussion.
Documents	Invoice, packing list, product photos, technical data, label details, or project-specific document request.	Keeps claims and order paperwork realistic.

Recommended next step wording

- Sample roll request: check appearance, width, backing, adhesive face, and packing.
- Trial carton order: useful after product family is clear and small approval quantity is needed.
- Bulk project order: prepare quotation or PI after size, quantity, packing, destination, and trade term are confirmed.

Factory and Order Proof

The images below are intended to help buyers understand production handling, custom-width slitting, width options, packing, and loading. They should support buyer confidence without overstating certificates or performance data.

Custom-width slitting: use when buyer asks for width, roll length, and carton route.

Width options: helps buyers compare sample width and project requirement.

Warehouse/carton staging: useful for packing and shipment discussion.

Loading preparation: supports sample-to-bulk order follow-up.

Sample, Quotation, and PI Workflow

Stage	Buyer action	Factory follow-up
1. Product interest	Choose PP, PE, PVC, or ask for comparison.	Confirm product route and missing RFQ fields.
2. Sample / trial	Send size, quantity, courier destination, and packing notes.	Check sample availability, packing, and courier route.
3. Quotation	Confirm width, thickness, roll length, quantity, packing, destination, and trade term.	Prepare practical quotation or ask for remaining details.
4. PI	Confirm company name, billing address, product details, quantity, destination, documents, and payment route manually.	Prepare PI wording only after order terms are checked.
5. Production and shipment	Confirm final packing marks, shipment route, and document needs.	Prepare production notes, packing list, photos, and shipping follow-up.

Claim boundary

Technical data, certificates, special performance claims, delivery dates, and project-standard compliance should be confirmed against actual documents before they are promised in a quotation or PI.
